PROJECTS

❖ **TextUtils** ....
                                                                         React.js

- TextUtils is a React web application built using HTML, CSS, JavaScript, and Bootstrap.
- It serves as a versatile tool for text manipulation, offering features such as converting text to uppercase or lowercase, copyingtext to the clipboard, and removing extra spaces.
- The app's intuitive interface and comprehensive functionalities make it a valuable resource for users seeking efficient textprocessing solutions.

❖ **EverGreenNews** ....
                                                                         React.js

- Developing an evergreen news app using React.js, HTML, CSS, JavaScript, and Bootstrap for the frontend.
- The backend fetches data through an API.
- Challenges may include handling API requests and displaying fetched data efficiently in React components.
- Challenges may include handling API requests and displaying fetched data efficiently in React components.
